

Quality

we make it simple

At Rearo, we make it simple, but we ensure that our products are made accurately, safely and without harm to the environment.

Recent ISO accreditations show Rearo's dedication and that we have worked hard to gain accreditation for Quality Control & Systems (ISO 9001), Health & Safety (ISO 18001) and our Environmental Performance (ISO 14001).

The ISO awards mean you can be assured that Rearo will accurately specify and process your order using the very latest manufacturing techniques in our safe, controlled 37,000 sq ft production facility in Glasgow. Due to our Shetland roots, we really do care for the environment, consideration is shown with operational efficiencies and the introduction of environmentally friendly raw materials such as Medite Exterior Grade MDF core at the forefront of our business.

REARO
we make it simple

With a head office in Glasgow and service centres in, Rosyth, Gateshead, Lerwick and Newport, Rearo now have over 70 staff operating within our Surfacing Division and the BSI accreditation is sensibly managed by senior management.

General Manager, David Graham has worked in surface fabrication for over 25 years and is responsible for the daily implementation of **ISO 9001**.

“The quality management system gives Rearo the framework needed to monitor and improve performance in every area that we choose. It helps us to succeed through improved customer satisfaction, staff motivation and continual improvement. We want to improve the way we operate whether that means increasing market share, driving down costs, managing risk more effectively or improving customer satisfaction and ISO 9001 allows us to fulfil this”.

Daniel Danso, Rearo's Engineer and Safety Officer is responsible for **ISO 18001**.

Reliable and safe work practices are often taken for granted but within a busy production facility it is essential that clear instruction is provided and that all possible safety and operation routines are adhered to.

With a BSc Degree from Paisley University in Mechanical Engineering majoring in Total Quality and recently obtaining NEBOSH General Certificate in Health and Safety, Daniel is ideally placed to monitor and develop Rearo's Health and Safety Management System.

“The team at Rearo rely on each other to produce quality accurate products and our health and safety policies assist us every day in our highly skilled environment”.

ISO 14001 is an internationally accepted standard that sets out how we can put in place an effective Environmental Management System (EMS). The standard is designed to address the delicate balance between maintaining profitability and reducing environmental impact; with the commitment of the entire organisation, it will enable us to achieve both objectives.

“At Rearo we are fully aware of the impact of our work on the environment and take as many steps as possible to reduce our impact. ISO 14001 underlines Rearo's commitment and we will continue to improve working practices, to save energy, to source new materials such as our MDF Selkie Board core substrate. ISO 14001 sets minimum standards but at Rearo we want to exceed these markers and where possible become the leading environmentally friendly business in our field”.
